Grade 5 Mathematics

Units of Study

| | | | |
|-----------------|--|-----------|-----------------|
| Unit 1A: | Whole Numbers and Decimals-Place Value | 🕒 23 days | 1st quarter |
| Unit 1B: | Whole Numbers and Decimals-Add/Subtract | 🕒 6 days | 1st quarter |
| Unit 1C: | Whole Numbers and Decimals-Multiply | 🕒 12 days | 1st quarter |
| Unit 1D: | Whole Numbers and Decimals-Divide | 🕒 17 days | 1st-2nd quarter |
| Unit 2A: | Fractions-Add/Subtract | 🕒 11 days | 2nd quarter |
| Unit 2B: | Fractions-Multiply | 🕒 23 days | 2nd quarter |
| Unit 2C: | Fractions-Divide | 🕒 11 days | 3rd quarter |
| Unit 4A: | Measurement-Volume (Lessons 26-28) | 🕒 12 days | 3rd quarter |
| Unit 3A: | Geometry and Algebraic Thinking-Expressions/Coordinate Plane | 🕒 20 days | 3rd quarter |
| Unit 3B: | Geometry and Algebraic Thinking-Classifications/Area | 🕒 20 days | 4th quarter |
| Unit 5: | Data Analysis and Statistics | 🕒 11 days | 4th quarter |
| Unit 4B: | Measurement- Conversions (Lessons 29-30) | 🕒 10 days | 4th quarter |

Appendices

Appendix A: [Proficiency Scale Template](#)

Appendix B: [Curriculum Refinement Form](#)

Appendix C: [K-12 Math Priority Standards Vertical Articulation](#)

Grade 5 Priority Standards

| | | |
|---------------------------|---------------|--|
| Priority Standards | 5.AT.8 | Define and use up to two variables to write linear expressions that arise from real-world problems, and evaluate them for given values. |
| | 5.C.1 | Multiply multi-digit whole numbers fluently using a standard algorithmic approach. |
| | 5.C.2 | Find whole-number quotients and remainders with up to four-digit dividends and two-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Describe the strategy and explain the reasoning used. |
| | 5.C.4 | Add and subtract fractions with unlike denominators, including mixed numbers. |
| | 5.C.5 | Use visual fraction models and numbers to multiply a fraction by a fraction or a whole number. |
| | 5.C.7 | Use visual fraction models and numbers to divide a unit fraction by a non-zero whole number and to divide a whole number by a unit fraction. |
| | 5.C.8 | Add, subtract, multiply, and divide decimals to hundredths, using models or drawings and strategies based on place value or the properties of operations. Describe the strategy and explain the reasoning. |
| | 5.DS.2 | Understand and use measures of center (mean and median) and frequency (mode), to describe a data set. |
| | 5.G.2 | Identify and classify polygons including quadrilaterals, pentagons, hexagons, and triangles (equilateral, isosceles, scalene, right, acute and obtuse) based on angle measures and sides. Classify polygons in a hierarchy based on properties. |
| | 5.M.5 | Apply the formulas $V = l \times w \times h$ and $V = B \times h$ for right rectangular prisms to find volumes of right rectangular prisms with whole-number edge lengths to solve real-world problems and other mathematical problems. |
| | 5.NS.1 | Use a number line to compare and order fractions, mixed numbers, and decimals to thousandths. Write the results using $>$, $=$, and $<$ symbols. |
| | 5.NS.2 | Explain different interpretations of fractions, including: as parts of a whole, parts of a set, and division of whole numbers by whole numbers. |

|--|---|--|
| <p>General Description of the Unit In this unit students will understand place value involving decimals. Students will understand powers of ten and recognize the relationship within a multi-digit number. Students will round decimals up to the thousandths to any given place value and will use a number line to compare and order decimals. In fourth grade, students learned to recognize and compare decimals to the hundredths.</p> | | |
| <p>Priority Standards</p> <ul style="list-style-type: none"> • 5.NS.1: Use a number line to compare and order fractions, mixed numbers, and decimals to thousandths. Write the results using $>$, $=$, and $<$ symbols. | <p>Supporting Standards</p> <ul style="list-style-type: none"> • 5.NS.3: Recognize the relationship that in a multi-digit number, a digit in one place represents 10 times as much as it represents in the place to its right, and inversely, a digit in one place represents $1/10$ of what it represents in the place to its left. • 5.NS.4: Explain patterns in the number of zeros of the product when multiplying a number by powers of 10, and explain patterns in the placement of the decimal point when a decimal is multiplied or divided by a power of 10. Use whole-number exponents to denote powers of 10. • 5.NS.5: Use place value understanding to round decimal numbers up to thousandths to any given place value. | |
| <p>Enduring Understandings</p> <ul style="list-style-type: none"> • Place-value understanding can be used to easily multiply and divide decimals by powers of ten. • There is a direct relationship between fractions, whole numbers, mixed numbers, decimals, and percents, and these different representations can be compared and ordered. • In the base-ten number system, a digit in one place represents 10 times as much as it represents in the place to its right, and inversely, a digit in one place represents $1/10$ of what it represents in the place to its left • Rounding decimals is similar to rounding whole numbers and can be useful for estimating comparisons and computations. | <p>Essential Questions</p> <ul style="list-style-type: none"> • What decimal number is greater than 0.016? What decimal number is less than 0.016? What methods could be used to compare these different numbers? • How are .5 and .500 similar? How are they different? How do the zeros after the decimal point affect the value of the number? • How do you compare and order decimals, percents, and fractions? • How is 37 related to 3.7? How is 37 related to 370? • What patterns can you describe for multiplying or dividing numbers by powers of ten? | |
| <p>Key Concepts</p> <ul style="list-style-type: none"> • I can use a number line to order fractions, decimals, and mixed numbers. (5.NS.1) • I can use a number line to compare fractions, decimals, and mixed numbers. (5.NS.1) • I can use greater than, less than, and equal to symbols to record the results of comparisons of fractions, decimals, and mixed numbers. (5.NS.1) | <p>Related Concepts</p> <ul style="list-style-type: none"> • I can explain that any digit is 10 times larger in value than the digit to its right. (5.NS.3) • I can explain that any digit is $1/10$ the value than any digit to its left. (5.NS.3) • I can show that when numbers are multiplied by powers of 10, there is a pattern in the number of zeros in the resulting product. (5.NS.4) • I can round decimal numbers up to thousandths, to any given place value. (5.NS.5) | <p>Vocabulary</p> <ul style="list-style-type: none"> • Decimal point • Mixed number • Multiple • Number line • Place value • Power of 10 • Rounding • Thousandths |
| <p>Mathematical Processes</p> <ul style="list-style-type: none"> • PS.6 Attend to precision. • PS.7 Look for and make use of structure. | | |

Textbook

Textbook Name: Ready Math, Second Edition:

Notes:

Number Sense Supplement: Decimals to the thousandths

In general, pacing was estimated with Ready Math recommendations for lessons, with one additional day added for each quiz and assessment.

Lessons:

Lesson 0: Lessons for the First Five Days (3 days-No Quiz)

Lesson 1: Understand Place Value (3 days)

Lesson 2: Understand Powers of Ten (3 days)

Lesson 3: Round Decimals (3 days)

Lesson 4: Compare Numbers (5 days)

Formative Assessments

Lesson 1 Quiz

Lesson 2 Quiz

Lesson 3 Quiz

Lesson 4 Quiz

Unit 1A Assessment

1 Math in Action Day

| General Description of the Unit | | |
|---|--|--|
| In this unit students will learn to add and subtract decimals to the hundredths place. Students will use models, drawings, and strategies and explain their reasoning when adding and subtracting with decimals. They will solve real-world problems involving adding and subtracting decimals including money in decimal notation. | | |
| Priority Standards <ul style="list-style-type: none"> • 5.C.8: Add, subtract, multiply, and divide decimals to hundredths, using models or drawings and strategies based on place value or the properties of operations. Describe the strategy and explain the reasoning. | Supporting Standards <ul style="list-style-type: none"> • 5.AT.5: Solve real-world problems involving addition, subtraction, multiplication, and division with decimals to hundredths, including problems that involve money in decimal notation (e.g. by using equations, models or drawings and strategies based on place value or properties of operations to represent the problem). | |
| Enduring Understandings <ul style="list-style-type: none"> • Adding and subtracting decimals is much like adding and subtracting whole numbers. Aligning place-values in computations is key with decimal addition and subtraction, as it is with whole number addition and subtraction. • It is important to understand the context of the problem to determine which operation(s) is needed and if the solution is reasonable. | Essential Questions <ul style="list-style-type: none"> • How are decimal addition and subtraction problems similar to whole number addition and subtraction problems? How are they different? • When might you use decimal addition and subtraction in your life? | |
| Key Concepts <ul style="list-style-type: none"> • I can add and subtract to hundredths using models or drawings. (5.C.8) • I can add and subtract decimals to hundredths using strategies based on place value or properties of operations. (5.C.8) • I can explain the strategy and method I used to add and subtract decimals to hundredths, and why I chose that specific strategy. (5.C.8) | Related Concepts <ul style="list-style-type: none"> • I can solve real-world problems that involve adding and subtracting numbers with decimals to the hundredths. (5.AT.5) • I can solve real-world problems that involve computation with money in decimal notation using equations to represent the problem. (5.AT.5) • I can solve real-world problems that involve computation with money in decimal notation using models or drawings to represent the problem. (5.AT.5) • I can solve real-world problems that involve computation with money in decimal notation using strategies based on place value or properties of operations to represent the problem. Lessons:

Supplement: Understanding Fractions (5 days)
Lesson 11: Add and Subtract Fractions with Unlike Denominators (5 days)

Formative Assessments

Lesson 11 Quiz

General Description of the Unit

In this unit students will explain different interpretations of fractions including as parts of a whole, parts of a set, and division of whole numbers by whole numbers. Students will then be introduced to multiplying fractions using visual models and numbers. Students will understand multiplication as scaling and learn to multiply fractions in word problems. Students will be able to find the area of a rectangle with fractional sides by multiplying fractional side lengths.

Priority Standards

- **5.C.5:** Use visual fraction models and numbers to multiply a fraction by a fraction or a whole number.
- **5.NS.2:** Explain different interpretations of fractions, including: as parts of a whole, parts of a set, and division of whole numbers by whole numbers.

Supporting Standards

- **5.AT.3:** Solve real-world problems involving multiplication of fractions, including mixed numbers (e.g., by using visual fraction models and equations to represent the problem).
- **5.C.6:** Explain why multiplying a positive number by a fraction greater than one results in a product greater than the given number. Explain why multiplying a positive number by a fraction less than 1 results in a product smaller than the given number. Relate the principle of fraction equivalence, $a/b = (n \times a)/(n \times b)$, to the effect of multiplying a/b by one.
- **5.M.2:** Find the area of a rectangle with fractional side lengths by modeling with unit squares of the appropriate unit fraction side lengths, and show that the area is the same as would be found by multiplying the side lengths. Multiply fractional side lengths to find areas of rectangles, and represent fraction products as rectangular areas.

Enduring Understandings

- Visual fraction models can provide context for calculations taking place in equations involving fractions.
- When multiplying mixed numbers, you cannot just multiply the whole numbers and multiply the fractions. This would result in partial products. It may be necessary to convert between mixed numbers and improper fractions.
- Many real-world situations require fraction multiplication. It is important to understand the context of the problem and use number sense to determine reasonableness of solutions.
- Multiplying fractions and whole numbers can be represented by repeated addition, and this connection can help to create an understanding of fraction multiplication.
- If a fraction, greater than one is multiplied by a number greater than one, the product will be larger than the original number. If a fraction, less than one is multiplied by a number greater than one, the product will be less than the original number.
- The area of a rectangle with fractional side lengths can be found by multiplying the side lengths. If given area and a side length, division can be used to find a missing side length.

Essential Questions

- What are common mistakes to avoid when multiplying fractions?
- How is fraction multiplication related to fraction addition?
- How can you represent the fraction $5/7$ as part of a whole? As part of a set? As a division problem?
- What are real-world examples of when you would need to multiply fractions and mixed numbers?
- How can you explain what is happening when a fraction is multiplied by a whole number, or when a fraction is multiplied by another fraction?
- When might you need to find area with fractional side lengths in real life?

Key Concepts

- I can use visual fraction models to multiply a fraction by a fraction or whole number. (5.C.5)

Related Concepts

- I can solve real-world problems that involve multiplying fractions including mixed numbers using visual fraction models. (5.AT.3)

Vocabulary

- Area
- Area formula
- Equivalent
- Fraction

- I can use numbers to multiply a fraction by a fraction or whole number. (5.C.5)
- I can interpret fractions as parts of a whole. (5.NS.2)
- I can interpret fractions as parts of a set. (5.NS.2)

- I can solve real-world problems that involve multiplying fractions including mixed numbers using equations to represent the problem. (5.AT.3)
- I can explain why multiplying a positive number by a fraction greater than 1 creates a product greater in value than the given number. (5.C.6)
- I can explain why multiplying a positive number by a fraction less than 1 produces a product smaller than the given number. (5.C.6)
- I can explore the concept of fraction equivalence. (5.C.6)
- I can relate fraction equivalence to the effect of multiplying a fraction by 1. (5.C.6)
- I can find the area of rectangles with fractional side lengths using unit squares. (5.M.2)
- I can find the area of rectangles with fractional side lengths by multiplying the side lengths. (5.M.2)
- I can show that the area of a rectangle found by using unit squares is equal to the area of a rectangle found by multiplying the side lengths. (5.M.2)
- I can represent fraction products as rectangular areas. (5.M.2)

- Fraction model
- Mixed number
- Model
- Parts of a set
- Parts of a whole
- Product
- Unit squares
- Whole number

Mathematical Processes

- PS.6 Attend to precision.
- PS.7 Look for and make use of structure.

Unit 4A Assessment

1 Day Math in Action

| General Description of the Unit In this unit students will be introduced to linear expressions and will learn to graph whole number coordinates on a coordinate plane and graph ordered pairs in the first quadrant. Students will evaluate expressions using properties of addition and multiplication. | | |
|---|---|---|
| Priority Standards <ul style="list-style-type: none"> ● 5.AT.8: Define and use up to two variables to write linear expressions that arise from real-world problems, and evaluate them for given values. | Supporting Standards <ul style="list-style-type: none"> ● 5.AT.6: Graph points with whole number coordinates on a coordinate plane. Explain how the coordinates relate the point as the distance from the origin on each axis, with the convention that the names of the two axes and the coordinates correspond (e.g., x-axis and x-coordinate, y-axis and y-coordinate). Additional Standards <ul style="list-style-type: none"> ● 5.AT.7: Represent real-world problems and equations by graphing ordered pairs in the first quadrant of the coordinate plane, and interpret coordinate values of points in the context of the situation. ● 5.C.9: Evaluate expressions with parentheses or brackets involving whole numbers using the commutative properties of addition and multiplication, associative properties of addition and multiplication, and distributive property. | |
| Enduring Understandings <ul style="list-style-type: none"> ● Expressions can be written using variables, often in the form of letters, in place of numbers whose value can be discovered by evaluating the expression. ● Coordinates are graphed on a coordinate plane. The first coordinate represents your x-value, and the second coordinate represents your y-value. ● Parentheses and brackets in an equation indicate that the problems within the grouping symbols are solved first in the equation. | Essential Questions <ul style="list-style-type: none"> ● What are variables? How are they used to represent a relationship between numbers? ● What does it mean to evaluate an expression? ● How would you explain to someone how to graph on a coordinate plane? When might it be useful to graph on a coordinate plane? ● What is the relationship between a coordinate plane and a number line? ● Why are parentheses and brackets used in an equation? | |
| Key Concepts <ul style="list-style-type: none"> ● I can use up to two variables to write linear expressions. (5.AT.8) ● I can define the variables to use when writing expressions that arise from real-world problems. (5.AT.8) ● I can evaluate linear expressions in real-world problems for given values. (5.AT.8) | Related Concepts <ul style="list-style-type: none"> ● I can graph points with whole number coordinates on a coordinate plane. (5.AT.6) ● I can show how each coordinate is the distance from the origin on each axis. (5.AT.6) ● I can identify which coordinate corresponds with which axis. (5.AT.6) ● I can represent real-world problems by graphing ordered pairs in the first quadrant. (5.AT.7) ● I can represent real-world equations by graphing ordered pairs in the first quadrant. (5.AT.7) ● I can interpret the values of the coordinates of a point in context. (5.AT.7) ● I can use the commutative properties of addition and multiplication to evaluate | Vocabulary <ul style="list-style-type: none"> ● Associative Property of Addition ● Associative Property of Multiplication ● Axis ● Brackets ● Commutative Property of Addition ● Commutative Property of Multiplication ● Coordinate ● Coordinate plane ● Distributive Property ● Evaluate ● Linear expression ● Ordered pair ● Parentheses ● Quadrant ● Variable ● x-axis ● y-axis |

- expressions involving whole numbers. (5.C.9)
- I can use the associative properties of addition and multiplication to evaluate expressions involving whole numbers. (5.C.9)
- I can use the distributive property to evaluate expressions involving whole numbers. (5.C.9)

Mathematical Processes

- PS.3 Construct convincing arguments and critique the reasoning of others.
- PS.4 Model with mathematics.

General Description of the Unit
 In this unit students will identify and classify polygons based on properties. Students will identify, describe, and draw triangles and circles using rulers and compasses. Students will also develop and use formulas for the area of triangles, parallelograms and trapezoids as well as solve real-world problems involving the perimeter and area of these figures. In fourth grade, students applied area and perimeter formulas to rectangles.

| | | |
|---|--|---|
| <p>Priority Standards</p> <ul style="list-style-type: none"> • 5.G.2: Identify and classify polygons including quadrilaterals, pentagons, hexagons, and triangles (equilateral, isosceles, scalene, right, acute and obtuse) based on angle measures and sides. Classify polygons in a hierarchy based on properties. | <p>Supporting Standards</p> <ul style="list-style-type: none"> • 5.G.1: Identify, describe, and draw triangles (right, acute, obtuse) and circles using appropriate tools (e.g., ruler or straightedge, compass and technology). Understand the relationship between radius and diameter. • 5.M.3: Develop and use formulas for the area of triangles, parallelograms and trapezoids. Solve real-world and other mathematical problems that involve perimeter and area of triangles, parallelograms and trapezoids, using appropriate units for measures. | |
| <p>Enduring Understandings</p> <ul style="list-style-type: none"> • Triangles can be classified based on their angle measures into categories such as right, acute, and obtuse. • Triangles can be classified by their side lengths as either equilateral, isosceles, or scalene. • Radius and diameter are related and represent measurements of a circle. • Formulas to find perimeter and area of shapes can be Googled and being able to choose, interpret, and use a formula is often more important than remembering the specific formula. • Finding the areas of rectangles, triangles, parallelograms, and trapezoids are related to one another, and partitioning shapes with visual models can demonstrate these similarities. • Solving expressions, understanding variables, order of operations, and the commutative and associative properties are all important skills for interpreting and using formulas. | <p>Essential Questions</p> <ul style="list-style-type: none"> • How are radius and diameter related? • What are different ways to classify a triangle? • How is finding the area of a rectangle, triangle, parallelogram and trapezoid similar? How are they different? Which shapes are most closely related? Most different? • If you could only remember how to find the area of two different shapes, which two would you choose and why? • Do you think you will need to use concepts of perimeter or area more in your life? Why? What are real-world examples of when you might need to find these? | |
| <p>Key Concepts</p> <ul style="list-style-type: none"> • I can identify polygons such as quadrilaterals, pentagons, and hexagons based on their properties. (5.G.2) • I can classify polygons such as quadrilaterals, pentagons, and hexagons based on their properties. (5.G.2) • I can identify and classify triangles into the following categories: equilateral, isosceles, scalene, right, acute, and obtuse based on their angle measures and sides. (5.G.2) • I can classify polygons in hierarchies based on their properties. (5.G.2) | <p>Related Concepts</p> <ul style="list-style-type: none"> • I can identify and describe right, acute, and obtuse triangles. (5.G.1) • I can identify and describe circles. (5.G.1) • I can draw right, acute, and obtuse triangles. (5.G.1) • I can use both appropriate tools and technology to draw triangles. (5.G.1) • I can draw circles using appropriate tools and technology. (5.G.1) • I can explain the relationship between the radius and diameter of a circle. (5.G.1) • I can develop formulas through investigation for the area of triangles. (5.M.3) • I can develop formulas through investigation for the area of parallelograms. (5.M.3) | <p>Vocabulary</p> <ul style="list-style-type: none"> • Acute triangle • Area • Compass • Diameter • Drawing triangle • Equilateral triangle • Hexagon • Isosceles triangle • Obtuse triangle • Parallelogram • Pentagon • Perimeter • Polygons • Quadrilateral • Radius • Right triangle • Scalene triangle • Straightedge |

- I can develop formulas through investigation for the area of trapezoids. (5.M.3)
- I can use a formula to find the area of triangles. (5.M.3)
- I can use a formula to find the area of parallelograms. (5.M.3)
- I can use a formula to find the area of trapezoids. (5.M.3)
- I can solve real-world problems that involve the perimeter and area of triangles, parallelograms, and trapezoids. (5.M.3)
- I can identify and use appropriate units when finding the perimeter and area of triangles, parallelograms, and trapezoids. (5.M.3)

- Trapezoid
- Triangle

Mathematical Processes

- PS.2 Reason abstractly and quantitatively.
- PS.5 Use tools appropriately.
